

Description

Proactive MFM Conservative is majority invested in assets which offer lower long term returns but are subject to less volatile market risk over the shorter to medium term. Its aim is to produce a return before tax but after investment costs over rolling eight-year periods which is equal to or better than inflation plus 2.5% p.a. It is suited to investors looking to minimise short-term fluctuation in values and the chance of capital loss at the expense of lower rates of long term return. In order to achieve more stable, conservative returns the portfolio is expected to have an average of 35% in growth assets over the longer term.

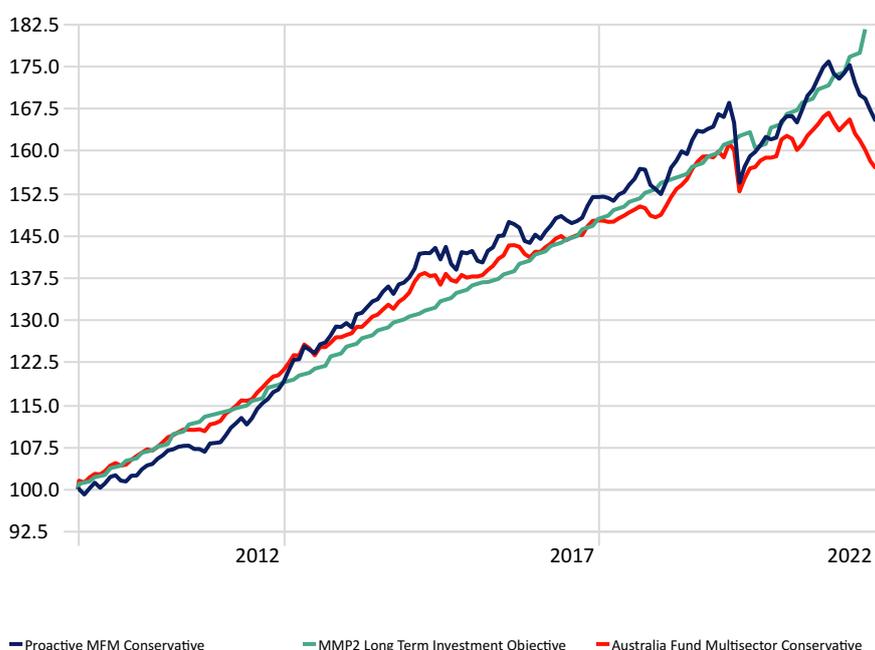

Commentary

This portfolio has been operating since September 2009 and has added value relative to its Long-Term Investment Objective (inflation plus 2.5% p.a.). The portfolio is managed with a focus on:

- Long –term Strategic Asset Allocation (SAA) across the major asset classes which is the main driver of longer-term returns and achieving a margin over and above inflation. The SAA is normally reviewed annually together with a set of Asset Allocation Operating Ranges.
- Dynamic Asset Allocation, shifting the actual asset allocation within the ranges to reduce the volatility in returns in the portfolio caused by financial market instability. DAA is normally reviewed monthly but not necessarily changed. There may be several shifts happening within any given year.
- Adding value through sound selection of funds within each asset class using a well-developed investment process that employs quantitative analysis and selection criteria as well as the experience and expertise of the members of the Investment Committee using inputs from external expert sources.

Cumulative Total Investment Return

Time Period: 24/09/2009 to 31/05/2022

International equities, as measured by the MSCI world index in Australian dollar terms, returned -0.83% while Australian equities as measured by the ASX200 returned -2.60%. Given the relative portfolio weightings to Australian and International equity holdings, these market conditions produced a negative portfolio return for May.

Global share markets ended May slightly stronger following two months of correction. With greater certainty that central banks are committed to confronting inflation, the VIX volatility index fell to 26.2 from 33.4 by month end. So-called “safe haven” assets such as gold were mostly off their highs, but US Treasuries performed strongly in price, and yields on benchmark bonds declined. The Australian dollar was a touch higher over the month.

The reported returns for the portfolio, since inception, are net of the underlying funds' investment costs as well as the Proactive management fee of 0.10% p.a.

The target allocations to asset classes were not changed in May.

Key contributors and detractors

CONTRIBUTORS	
Antipodes Global Fund	Despite heightened volatility, global equities were relatively unchanged in May. Energy, utilities and financials outperformed whilst consumer staples, consumer discretionary and information technology underperformed leading to the portfolio outcome recorded for the fund.
First Sentier Global Listed Infrastructure	Energy and utilities exposures contributed to performance. The strategy is positioned to continue to benefit from inflation and the climate transition.
DETRACTORS	
Hyperion Global Growth Companies	Macroeconomic and geopolitical pressures continue to weigh heavily on equity markets and in return the fund. Macro factors (not stock fundamentals) appear to be driving the recent fund underperformance with short-termism and fear dominating market pricing currently. The companies held within the portfolio have superior pricing power due to their strong value propositions that will be resilient through a period of rising rates.
Fidelity Australian Opportunities Fund	The portfolio's growth-at-reasonable price philosophy has seen better days. Following the announcement of Kate Howitt, lead portfolio manager of the strategy, after a decade of managing the fund since inception, we will be keeping a close eye on the transition to the new lead portfolio manager, Casey McLean.

Market update

The pace of global economic growth is slowing. The broad-based tightening in global monetary and financial conditions is acting to slow spending growth, accentuated by the high cost of basic food and energy staples. European geopolitical uncertainty is also weighing heavily on business confidence and investment intentions worldwide.

Central banks have made it clear that they will be raising rates in the most widespread tightening for more than two decades. Monetary policy is responding to inflation reaching multi-decade highs in many countries, fueled by supply chain disruptions during pandemic lockdowns, and soaring energy and food costs since Russia invaded Ukraine in February. Despite some confidence that the worst may be behind us, three issues remain of concern.

1. The risk of the US Federal Reserve (Fed) overtightening. With US inflation running higher than 8% and a policy rate of 1%, the risk looks small at present. However, headline inflation numbers are still heavily affected by post-lockdown supply shocks.
2. Europe faces a larger problem as the central bank is forced into action by high inflation, just as the war in Ukraine and the resultant sanctions aimed at Russia have exposed the continent to further supply shocks. Our view is that Europe is at greater risk of stagflation¹ than the US.
3. In contrast to the US and Australia where economic indicators are holding up well, China has been on an economic slide since its property clampdown 12 months ago. Unemployment is rising and could reach levels not seen in many years.

Inflation in Australia increased to a headline rate of 2.1% in the March quarter and 5.1% over the year. Fuel and new housing costs accounted for around half of the quarterly increase. We expect reported inflation to peak at around 6%, before retreating to 3.5% next year, and cash rates to reach a terminal rate of around 2%. In this scenario, we would expect mortgage rates to rise by 2%, which will drag down residential property by around 10%. The good news is that Australian export income should continue to be buoyed by sustained commodity prices and agricultural exports.

There are solid reasons to expect that Australian corporate earnings will remain relatively robust. Australian earnings are on track for around 20% growth in the current financial year, roughly double the forecast growth in the rest of the world. Resources dominate growth forecasts for FY22 but are conservative for FY23. Consensus forecasts for iron ore for FY23 are around \$US90-95 per tonne so if the price stays above the current level of around \$130 per tonne, further upgrades are assured.

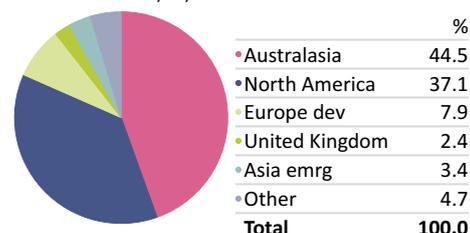

We remain confident that solid investments/businesses that benefit from inflation and moderate economic growth will continue to do well. Similarly, premium real estate will continue to provide attractive returns.

Asset Allocation Summary
